

IN THE CLAIMS

1. (currently amended) A mounting ~~bracket~~kit for mounting a mountable device to a mounting support having an exterior surface comprising:

a mounting bracket having a first section and a second section, each of said first and second sections having an inner surface, at least one of said sections having a groove, said first and second sections being joinable to one another to form an area therebetween, said area bound by said inner surfaces; and

at least two interchangeable curved inserts each sized to fit within said area, each of said inserts including a pair of insert halves mateable with one another to form one of said inserts, said inserts having a thickness and at least one protrusion adapted to fit into said groove of at least one of said sections, said inserts having the same outside diameter and different inside diameter defined by a curved inner surface and a curved outer surface of said inserts, whereby the radial distance between said curved inner and outer surfaces are is different for each of said inserts, said curved inner surface of each of said inserts adapted to directly and substantially contact said exterior surface of said mounting support.

2. (currently amended) The mounting ~~bracket~~kit according to claim 1, said mounting bracket further comprising a mountable device attachment connected to one of said first section and said second section.

3. (cancelled)

4. (currently amended) The mounting ~~bracket~~kit according to claim 1, said mounting bracket further comprising at least two flange members on each of said first and second sections, said flange members of said first section adapted to mate with corresponding said flange members of said second section.

5. (currently amended) The mounting ~~bracket~~kit according to claim 1, further comprising a plurality of grooves on said inner surface of said at least one insert.

6. (currently amended) The mounting ~~bracket~~kit according to claim 4, wherein said first and second sections of said bracket are mated at said flange members using one or more fasteners.

7. (currently amended) The mounting ~~bracket~~kit according to claim 1, wherein each of said first and second sections of said bracket includes a groove.

8. (currently amended) A mounting ~~kit~~bracket for attachment to a mounting pole having an exterior surface comprising:

a mounting bracket having at least two sections, at least two sections each of said sections having a concave inner surface, said sections joinable together with their respective concave inner surface facing one another to define an area having a cross-sectional shape, each concave inner surface having at least one groove along a longitudinal axis of said sections; and

at least a pair of interchangeable inserts, each of said inserts having a convex outer surface and a concave inner surface, each of said inserts including a pair of insert halves mateable with one another to form one of said inserts, ~~said inserts when in assembled relationship having said convex outer surfaces~~ of said inserts defining a cross-sectional shape corresponding to the cross-sectional shape of said area and said concave inner surfaces of said inserts defining a cross-sectional shape corresponding to a cross-sectional shape of said mounting pole, each of said inserts having at a thickness and at least one protrusion aligned along the longitudinal axis of said inserts and adapted to fit within said at least one groove of said sections, wherein said concave inner surfaces of each of

said inserts ~~are~~is adapted to directly and substantially contact engage~~said exterior surface of said mounting pole~~, said inserts having the same outside diameter and different inside diameter defined by said convex outer surface and said concave inner surface, whereby the radial distance between said convex outer surface and said concave inner surface ~~are~~is different for each of said inserts.

9. (currently amended) The mounting ~~bracket~~kit according to claim 8, said mounting bracket further comprising at least two flanged members associated with each of said sections adapted for joining said sections.

10. (withdrawn) The mounting bracket according to claim 8, further comprising a plurality of rib-like protrusions aligned along said longitudinal axis of said concave inner surface of said inserts.

11. (withdrawn) The mounting bracket according to claim 8, further comprising a plurality of protrusions aligned along said longitudinal axis of said concave inner surface of said inserts.

12. (cancelled)

13. (cancelled)

14. (cancelled)

15. (cancelled)

16. (cancelled)

17. (cancelled)

18. (currently amended) An insert kit ~~comprising a pair of interchangeable inserts for a mounting bracket for mounting a mountable device to a mounting support having an exterior surface comprising, a pair of interchangeable inserts, said each inserts~~ having a generally ~~semicylindrical~~ shape, each of said inserts including a pair of insert halves mateable with one another to form one of said inserts, each of said inserts having a longitudinal axis and an outer convex surface sized to fit

within an inner concave surface of a mounting bracket, said inner concave surface of said mounting bracket having two or more grooves, each of said inserts having a thickness and at least one protrusion shaped and sized to fit within one of said grooves of said mounting bracket, said inserts having the same outside diameter and different inside diameter defined by said outer convex surface and an inner surface of said inserts, whereby the radial distance between said outer convex surface and said inner surface ~~are~~ is different for each of said inserts, said inner surface of each of said inserts adapted to directly and substantially contact said exterior surface of said mountable support.

19. (withdrawn) The pair of inserts according to claim 18, wherein the inserts are flexibly attached along a linear edge parallel to said longitudinal axis.

20. (withdrawn) The pair of inserts according to claim 19, wherein said inserts are comprised of an insert material and are flexibly attached along said linear edge using a hinge comprised of a thin layer of said insert material.

21. (currently amended) A kit for use in mounting a mountable device to a mounting support having an exterior surface, said kit comprising:

a mounting bracket having an inner surface and an opening, said opening bounded by said inner surface, said inner surface having at least one groove; and

at least two interchangeable bracket inserts adapted to be received within said opening, each of said inserts including a pair of insert halves mateable with one another to form one of said inserts, said inserts each having an inner surface and an outer surface forming a predetermined thickness therebetween, said outer surface of each insert having a predetermined dimension and at least one protrusion adapted to be received within said at least one groove, said thickness of

each said insert varying from said thickness of the other of said inserts, said predetermined dimension of each of said inserts being the same whereby said inserts are adaptable to be received with said opening having their outer surface in direct contact with said mounting bracket and their inner surface directly and substantially in contact with said exterior surface of said mounting support.

22. (cancelled)

23. (withdrawn) The insert according to claim 21, further comprising a plurality of rib-like protrusions along said inner surface of said inserts.

24. (currently amended) A kit for use in mounting a mountable device to a mounting support having an exterior surface, said kit comprising:

a mounting bracket having an inner surface and an opening, said opening bounded by said inner surface, said inner surface having at least one groove; and

at least two interchangeable bracket inserts adapted to be received within said opening, each of said inserts including a pair of insert halves mateable with one another to form one of said inserts, said inserts having an inner surface and an outer surface, said outer surface of each insert having a predetermined outer dimension and at least one protrusion adapted to be received within said at least one groove, said outer surface of each of said inserts being identical to each other in said outer dimension, said inner surface of each of said inserts having an inner dimension varying from said inner dimensions of the other of said inserts, whereby said inserts are adaptable to be received with said opening having their outer surface in direct contact with said mounting bracket and their inner surface directly and substantially in contact with said exterior surface of said mounting support.

25. (currently amended) A kit for use in mounting a mountable device to a mounting pole having an exterior surface, said kit comprising:

a mounting bracket comprising a first section and a second section, each of said first and second sections having an inner concave surface, at least one of said inner concave surfaces of said sections having at least one groove, said first and second sections being joinable to one another forming an area between said inner concave surfaces; and

at least a pair of interchangeable inserts, each of said inserts including a pair of insert halves mateable with one another to form one of said inserts, each of said inserts having an inner concave surface and an outer convex surface, said outer convex surface having at least one protrusion adapted to be received within said at least one groove, said outer convex surface of each of said inserts sized to fit within said area in contact with said inner concave surface of said sections when joined together, ~~said inserts between their outer and inner surfaces each having a different thickness different from each other between their said outer and inner surfaces.~~

26. (cancelled)

27. (currently amended) A kit for use in mounting a mountable device to a mounting pole having an exterior surface, said kit comprising:

a mounting bracket comprising a first section and a second section, each of said first and second sections having an inner concave surface, at least one of said inner concave surfaces having a groove, said first and second sections being joinable to one another forming an area between said inner concave surfaces; and

at least a pair of interchangeable inserts, each of said inserts including a pair of insert halves mateable with one another to form one of said inserts, each of said inserts having

an inner surface and an outer convex surface, said outer convex surfaces of said inserts having at least one protrusion adapted to be received within said at least one groove, said outer convex surface of said inserts sized to fit within said area in contact with said inner concave surface of said sections when joined together, said inner surface of each said inserts having dimensions varying from the other of said inserts, said inner surface of each of said inserts adapted to directly and substantially engage said exterior surface of said mounting pole.

28. (currently amended) The kit in accordance with claim 27, wherein said inner surfaces of said inserts are concave, and said outer convex surface and said inner surface define a thickness, said thickness being different for each of said pair of inserts.

29. (currently amended) A kit for use with a mounting bracket having an inner concave surface with at least one groove in mounting a mountable device to a mounting pole having an exterior surface, said kit comprising:

a plurality of interchangeable inserts, each of said inserts including a pair of insert halves mateable with one another to form one of said inserts, each of said inserts having an outer convex surface dimensioned to fit in contact with said inner concave surface of said mounting bracket, said outer convex surface of each insert having at least one protrusion aligned along the longitudinal axis of the insert and shaped to fit into said groove of said inner concave surface of said mounting bracket, said inserts each also having an inner concave surface, said inserts forming a thickness between said inner and outer surfaces differing from each other, said inner concave surface of each of said inserts adapted to directly and substantially engage said exterior surface of said mounting pole.

30. (previously presented) The kit according to claim 29, wherein each of said inserts has said outer convex surface identical to the outer convex surface of all the other of said inserts.
